

ABIR AL ZUBAYER

Cloud & DevOps Engineer

Dhaka, Bangladesh • abiralzubayer0@gmail.com • +880 1756-759642

[alzubayer.com](#) | [github.com/abirall](#) | [linkedin.com/in/abir-al-zubayer](#) | [medium.com/@abirall](#)

PROFESSIONAL SUMMARY

Cloud & DevOps Engineer focused on building reliable cloud infrastructure, automated CI/CD pipelines, containerized applications, and Infrastructure as Code. Hands on experience with AWS, Terraform, Docker, Kubernetes, GitHub Actions, Jenkins, Linux, and monitoring platforms. Experienced in designing reproducible deployment workflows, production style cloud environments, reverse proxies, observability stacks, and zero downtime deployment patterns. Combines an engineering mindset with a strong UX background to build practical developer and operational workflows.

CORE COMPETENCIES

CLOUD ARCHITECTURE

AWS (VPC, EC2, RDS, ALB, S3, Route53, IAM, CloudWatch, CloudTrail), Azure, Google Cloud Platform (GCP)

INFRASTRUCTURE AS CODE

Terraform Modules, State Management, Workspaces, Reusable Infrastructure

CONTAINERS & ORCHESTRATION

Docker, Kubernetes (EKS, GKE), Docker Compose, Helm Charts, Container Security

CI/CD & AUTOMATION

GitHub Actions, Jenkins, GitLab CI, Declarative Pipelines, Automated Deployments

MONITORING & OBSERVABILITY

Prometheus, Grafana, Alertmanager, ELK Stack, AWS CloudWatch

LINUX & NETWORKING

Ubuntu, CentOS, Bash, Python, DNS, SSL/TLS, VPC, Networking, Reverse Proxy

SELECTED DEVOPS & CLOUD PROJECTS

Three-Tier AWS with Terraform, Docker & GitHub Actions

[github.com/abirall/AWS-Three-Tier-Architecture](#)

- Architected and deployed a production-grade three tier infrastructure (Frontend, Backend, Database) on AWS using Terraform IaC, reducing environment provisioning and setup time by 85%.
- Automated a secure CI/CD pipeline using GitHub Actions for Docker image builds, scanning, pushing to ECR, and orchestrating multi environment deployments.
- Configured Application Load Balancer (ALB) with dynamic path-based routing, auto-scaling groups to manage peak loads, and Amazon RDS with multi-AZ automated backups.

Automated CI/CD Pipeline with Jenkins & Docker

[Enterprise Jenkins Integration](#)

- Designed and built robust end to end declarative CI/CD pipelines using Jenkins, Git, Docker, and Kubernetes for modern containerized microservices.
- Containerized complex Node.js web applications and orchestrated zero downtime deployments to self hosted Kubernetes clusters via rolling updates.
- Implemented secure Nginx reverse proxy configurations with automatic Let's Encrypt SSL/TLS termination, ensuring 99.9% application availability.

Server Monitoring & Alerting Platform

Active Implementation

- Deployed and tuned a distributed Prometheus + Grafana monitoring stack on high traffic Linux servers to gather systems telemetry.
- Created custom interactive visualization dashboards to track critical metrics (CPU, Memory leaks, Disk I/O pressure, and Networking saturation).
- Configured proactive Alertmanager thresholds, routing warnings instantly to slack channels, which reduced incident response time by 60%.

PROFESSIONAL EXPERIENCE

Junior DevOps Engineer (Remote)

2025 – Present

Logic Matrix LLC

Fairfax, VA 22031-4516 United States

- Build and maintain AWS cloud infrastructure using Terraform, including ECS, ECR, networking, IAM, CloudWatch, and related services.
- Develop and maintain CI/CD pipelines with GitHub Actions for automated Docker builds, security scanning, image publishing, and deployments.
- Containerize applications using Docker and deploy containerized workloads to AWS ECS with production-focused deployment practices.
- Troubleshoot production infrastructure, application deployments, containers, databases, and networking issues across cloud environments.
- Work with development teams to improve deployment automation, infrastructure reliability, security, and zero-downtime deployment workflows.

UX/UI Designer & DevOps Practitioner

Sept 2022 – Nov 2024

DipChain Labs

Dhaka, Bangladesh

- Successfully bridged the gap between UX design and systems automation by custom-building developer workflow tools, admin dashboards, and pipeline monitoring interfaces.
- Applied core human-computer interaction (HCI) and UX principles to establish highly intuitive Grafana templates and cloud status hubs used by 15+ multidisciplinary team members.
- Administered end-to-end application build-test-deploy workflows using Docker-based containers and robust GitHub Actions configurations.

EDUCATION

BSc in Computer Science & Engineering

Bangladesh University (2022 – 2026)

4-Year Diploma in Design

Govt. Graphic Arts Institute (2018 – 2022)

Secondary School Certificate (SSC)

Patuya Mehediabug High School (2016 – 2018)

LANGUAGES

- **English** (Professional Working Proficiency)
- **Bangla** (Native)

CERTIFICATIONS & TRAINING

Google Coursera DevOps Specialization

Hands-on labs detailing Docker, Kubernetes, and CI/CD pipelines.

Linux & Cloud Fundamentals

Comprehensive self-taught studies validated by deploying live projects.

WillFire DevOps Internship Cohort

Collaborated on real-world cloud practices, environments, and setups.
